

# **ROYAL** **PROTOCOL**

**WHITE PAPER**

# OUR MISSION

We started Royal Protocol when we asked ourselves what was missing from the online gaming and casino experience. We know that this hobby is more than just passing the time. It's a way of relieving stress, interacting with friends and acquaintances, or even padding your paycheck.

Covid has changed everything. Practically overnight, we lost the ability to connect with others as we once did. This has caused a sharp increase in cases of depression and anxiety around the globe. Now more than ever, we have no choice but to find creative ways to stay connected and adopt a "new normal". We at Royal Protocol know it's hard enough to complete complicated, multistep processes to deposit, access, and withdraw funds, and worry about if your transactions are secure at the same time.

That's why we are using the power of blockchain technology to make your life a easier and a more fun. With nearly-instant transactions that are safety-guaranteed, your money is only seconds away from being where it belongs.

In these unprecedented times, we bring the arcade and casino to you.

# WHAT IS ROYAL PROTOCOL?

Royal Protocol is changing the future of gaming and online casinos by using cryptocurrency to enhance the player's experience.

We know how frustrating it can be when your mobile and online games don't go as planned. Struggling to link to your account, running out of in-game currency at exactly the wrong moment, and having to wait to upload more funds to continue playing, can ruin the experience for anyone. Royal Protocol is using Crypto to solve these problems! Our platform allows you to conveniently utilize the BSC blockchain so you have lightning fast access to arcades and casinos at your fingertips.

Accessing your funds has never been easier. With the click of a button, you can connect your MetaMask wallet directly to our multi-use platform and your crypto will be instantly available for use. All that's left to do is to select your currency (such as \$ROY), your game of choice, and start playing.

We have something for everyone, with a wide selection of entertainment options. Whether you enjoy casual games or poker tables, we are here for you.

# **OUR TEAM**

**Our team consists of passionate volunteers who are dedicated to making your life easier and more entertaining.**

**The cryptosphere has allowed people from all over the world to bring their diverse backgrounds to the Royal Protocol project. This means we have the ability to consider problems from a wide variety of unique perspectives, so you can rest assured that our launch will go smoothly and any issues will be addressed promptly and efficiently.**

**We promise to always respond to our community with: Transparency, Integrity, Compassion, Persistence**

**With this, success is not only possible, it's guaranteed.**

# OPEN SOURCE

To us, trust is all about transparency. Our platform is built for your enjoyment but it rests on the solid foundation of our integrity. That is why we are proudly 100% open source.

We have nothing to hide from current or future investors. Every part of Royal Protocol is readily available for anyone to review. We believe that if we can't hold up to consumer scrutiny, we don't deserve your confidence.

We are aware that rumors and FUD (fear, uncertainty and doubt) are prevalent in every corner of the internet, and for understandable reasons. You're trusting brand new companies with your paycheck and have no proof that they share your goals and values. That's why our admin team is happy to discuss any potential concerns. We will always give you an honest response as quickly as possible.

# BURN MANAGEMENT

These days, just about every Binance Smart Chain token has a variety of burn functions. These can be integrated into the tokenomics for streamlining the burns in consistent and reliable way, or they can be handled manually by a team for a more precise impact as the token grows. Since our top priority is our holders, we chose to forego an automated burn feature in favor of a more involved method of manual burns. Burns cause an immediate impact in the early stages of adoption, and we want to make sure they are tailor made to suit the Royal Protocol community.

These “burn cycles” will be executed to celebrate milestone achievements over the course of the project, such as when we launch our gaming platform. A deliberate burn strategy will strengthen our position in the cryptosphere while also rewarding the holders who have stayed with us from the beginning. These burns will be public, so their progress will be available for independent audit at any time, day or night.

By putting in the extra effort of overseeing this process personally, the Royal Protocol team will be able to make nuanced decisions to best benefit our holders. Furthermore, like everything else we do, all information remains public for complete transparency with those who invested in the project or use our platform.

# TOKENOMICS

5,069,820,000,000 \$ROY total supply

- 50% of total tokens locked for liquidity
- 20% allocated for project development locked 6 months in dxsale.app
